Summary - IQstream to TimeIQ

Name	iqstream_to_timeiq
Worker Type	Application
Version	1.5
Release Date	4/2019
Component Library	ocpi.assets.misc_comps
Workers	iqstream_to_timeiq.hdl
Tested Platforms	isim, xsim, modelsim, zed, matchstiq_z1, e3xx, alst4, ml605

Functionality

The IQstream to TimeIQ component adapts the iqstream protocol to the TimeStamped_IQ protocol.

Worker Implementation Details

iqstream_to_timeiq.hdl

The TimeStamped_IQ protocol consists of multiple opcodes which include complex IQ samples, and the iqstream protocol consists only of complex IQ samples. The iqstream_to_timeiq worker forwards data from the input port to the output port and applies the samples opcode to it.

Component Spec Properties

There are no component spec properties for this component

Worker Properties

There are no worker implementation-specific properties for this component

Component Ports

Name	Producer	Protocol	Optional	Advanced	Usage
in	false	iqstream_protocol	false	-	Signed complex samples
out	true	TimeStamped_IQ-prot	false	-	Signed complex samples plus other operations

Worker Interfaces

iqstream_to_timeiq.hdl

Type	Name	DataWidth	Advanced	Usage
StreamInterface	in	32	-	Signed complex samples
StreamInterface	out	32	-	Signed complex samples plus other operations

Control Timing and Signals

The iqstream_to_timeiqworker uses the clock from the Control Plane and standard Control Plane signals.

Worker Configuration Parameters

Test and Verification

The input file contains 5824 bytes of arbitrary data. It is the same input file used for the TimeIQ_to_IQstream unit test. The expected output waveform is identical to the input file.
