# 1 Document Scope

This document describes the OpenCPI FSK demo application. It includes a description of the application, instructions to setup the hardware, build of bitstreams, and execution of the application itself on various platforms.

# 2 Supported Hardware Setups

This app is supported on the following hardware configurations:

- Zedboard/FMCOMMS2
- Zedboard/FMCOMMS3
- x86/ML605/FMCOMMS2 in FMC LPC slot
- x86/ML605/FMCOMMS3 in FMC LPC slot
- Matchstiq-Z1
- Zedboard/Zipper/MyriadRF
- x86/Stratix IV GX development kit (230 Edition)/Zipper/MyriadRF in HSMC A slot
- x86/Stratix IV GX development kit (230 Edition)/Zipper/MyriadRF in HSMC B slot
- x86/ML605/Zipper/MyriadRF in FMC LPC slot
- x86/ML605/Zipper/MyriadRF in FMC HPC slot

# 3 Description

The FSK App may be run in one of five available modes. The modes are *filerw*, *rx*, *tx*, *txrx*, and *bbloopback*. The *filerw* mode uses file\_read and file\_write workers to process the input using only application workers (platform agnostic) in a purely digital fashion. A block diagram of the FSK App *filerw* mode can be seen in Figure 1.

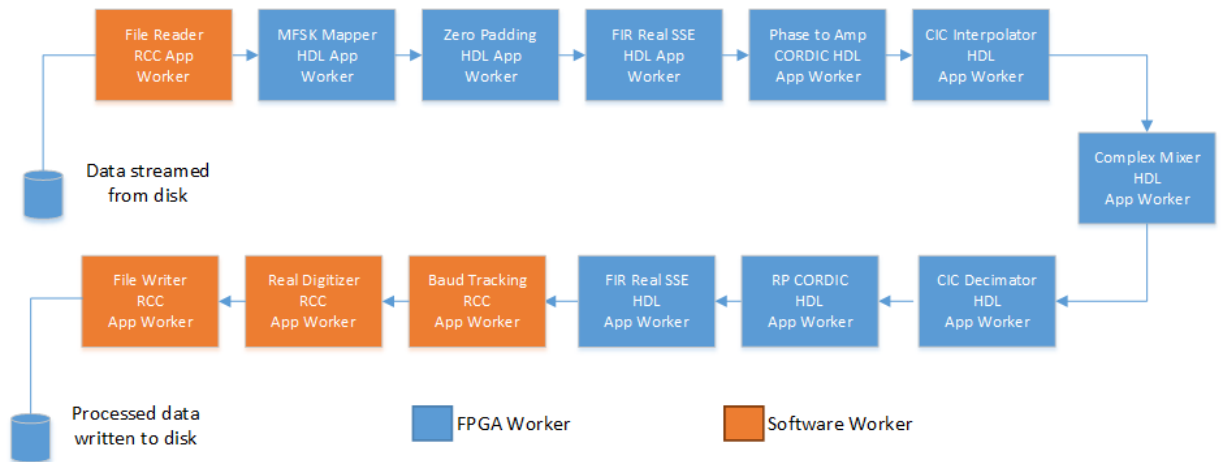

Figure 1: FSK App *filerw* mode Block Diagram

The *rx* mode inputs IQ data from the Lime ADC and processes the FSK signal down to bits that are written to file. A block diagram of the FSK App *rx* mode can be seen in Figure 2.

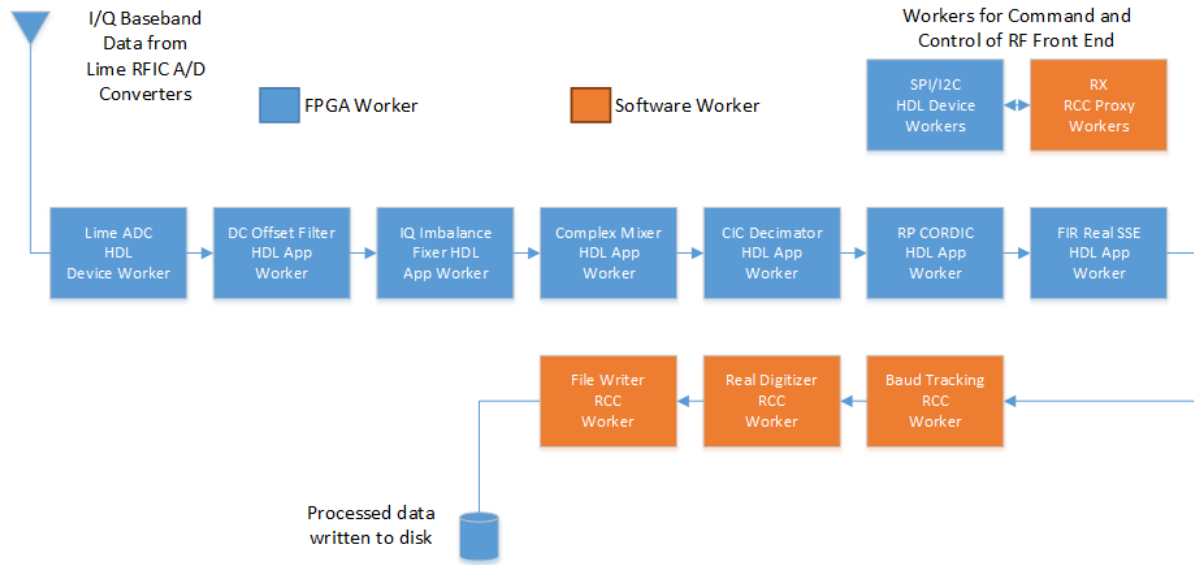

Figure 2: FSK App *rx* mode Block Diagram

The *tx* mode inputs a file from disk, modulates the input as a FSK signal, and transmits the input via the Lime DAC. A block diagram of the FSK App *tx* mode can be seen in Figure 3.

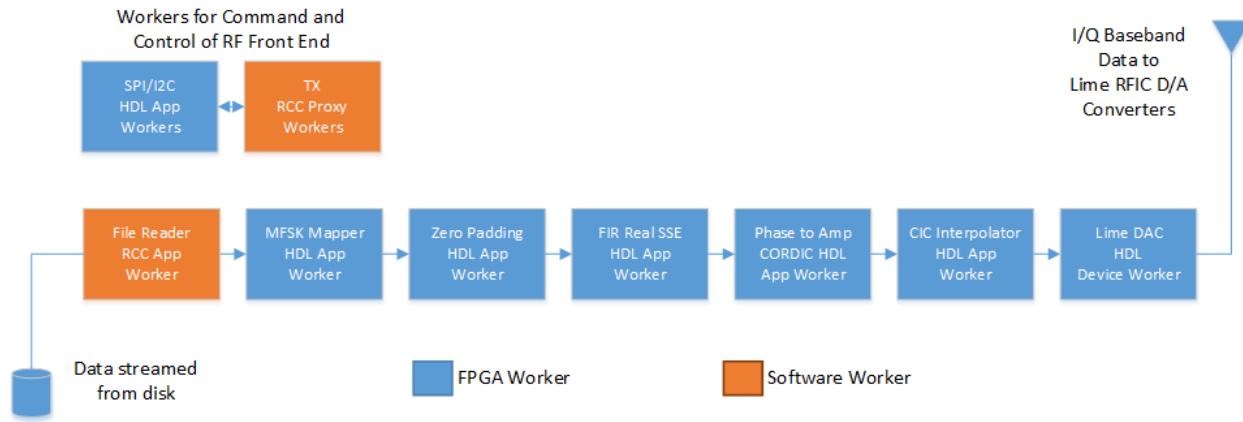

Figure 3: FSK App *tx* mode Block Diagram

The *txrx* mode is the full transceiver mode of the application which combines the functionality of Figures 2 and 3 into a single application. This mode transmits input file data as the radio RF TX output and inputs RF RX radio input that is written to file. The *bbloopback* mode utilizes the same HDL assembly and application XML as the *txrx* mode but utilizes a built-in test mode of the Lime transceiver to loopback analog data at baseband.

## 4 Building the Application

### 4.1 Dependencies

The tables below breakdown the workers used within the various platforms and modes of the FSK App. Appendix A shows the exact worker configurations used in the HDL assemblies. See the individual component data sheets for more information and build instructions. Similarly, the HDL platform worker and configurations for the intended radio must be compiled prior to building the various FSK bitstreams.

## 4.2 FSK Mode Configurations

### 4.2.1 Common to all Hardware

Application XML	filerw	rx	tx	txrx	bbloopback
app_fsk_filerw (dependency only, no build required)	x				
HDL Assemblies	filerw	rx	tx	txrx	bbloopback
fsk_filerw	x				
dc_offset_iq_imbalance_mixer_cic_dec_rp_cordic_fir_real		x			
mfsk2_zp16_fir_real_phase_to_amp_cordic_cic_int			x		
fsk_modem				x	x
RX Path Workers	filerw	rx	tx	txrx	bbloopback
dc_offset_filter.hdl		x		x	x
iq_imbalance_fixer.hdl		x		x	x
complex_mixer.hdl	x	x		x	x
cic_dec.hdl	x	x		x	x
rp_cordic.hdl	x	x		x	x
fir_real_sse.hdl	x	x		x	x
baudTracking.rcc	x	x		x	x
real_digitizer.rcc	x	x		x	x
file_write.rcc	x	x		x	x
TX Path Workers	filerw	rx	tx	txrx	bbloopback
file_read.rcc	x		x	x	x
mfsk_mapper.hdl	x		x	x	x
zero_pad.hdl	x		x	x	x
fir_real_sse.hdl	x		x	x	x
phase_to_amp_cordic.hdl	x		x	x	x
cic_int.hdl	x		x	x	x

### 4.2.2 Additional Dependencies for FMCOMMS2

Application XML	filerw	rx	tx	txrx	bbloopback
app_fsk_rx_fmcomms2 (dependency only, no build required)		x			
app_fsk_tx_fmcomms2 (dependency only, no build required)			x		
app_fsk_txrx_fmcomms2 (dependency only, no build required)				x	
RX or TX Path Workers	filerw	rx	tx	txrx	bbloopback

## 4.5 Executable

The software portion of the application consists of a C++ program written using the OpenCPI C++ API as well as RCC proxy workers for command and control functionality. The program references the appropriate application XML file for the requested hardware and mode. The app XML files contain all of the property settings for the components in each application, except for the configuration of the endpoint proxy(ies). These endpoint proxy-related settings are passed via command-line prompted values to the appropriate endpoint proxy workers.

To build for the host platform (which is the case if ML605 or Stratix IV platform is intended to be used), run the following commands from the FSK directory:

```
ocpidev build
```

To build for the Zedboard or Matchstiq-Z1 (which run the xilinx13.3 PetaLinux operating system), run the following command from the FSK directory:

```
ocpidev build --rcc-platform xilinx13.3
```

## 5 Testing the Application

### 5.1 Baud Synchronization

The input filename for the application is `idata/Os.jpeg`. It is modified from an original JPEG image (see Figure 4) with data prepended to it for baud synchronization purposes (240 bytes of an alternating 1-0 pattern followed by 2 bytes are the value 0xFACE). In the receive data stream, `real_digitizer.rcc` worker makes symbol/bit decisions and only sends out bits that occur after the first detected 0xFACE bit pattern (b1111101011001110).

### 5.2 Sample test setup

The test setup varies per mode of operation. The base test setup includes a hardware platform of choice and appropriate power and USB cables (Matchstiq-Z1 and Zedboard/Zipper use the USB cable to access the terminal via a program such as `screen` or over a USB-over-Ethernet connection; Stratix IV and ML605 require a USB cable for JTAG loading). All other test modes expand upon this base configuration, and may or may not include additional RF cabling or external equipment.

The *filerw* mode requires only the base test setup since no transceiver operations are actuated (data passes to and from the FPGA in a “loopback” fashion). Upon application execution, the expected result is written to `odata/out_app.fsk_filerw.bin`, which is a transmitted copy of the input file `idata/Os.jpeg`.

The *bbloopback* mode is similar to the *filerw* mode, but data goes beyond the FPGA through the radio’s built-in analog baseband loopback, and back into the FPGA. Because the data never reaches the TX/RX connectors, no external RF cabling is required. The expected result is a transmitted copy of the `idata/Os.jpeg` file as the output `odata/out_app.fsk_bbloopback.bin`.

The next mode is the *rx* mode, which requires the base test setup with an RX antenna, as well as another transmitter (such as another platform running the *tx* mode) in order to broadcast a known FSK signal. Optionally, a spectrum analyzer may be connected to the transmitter to visually verify that the signal being fed into the radio’s RX input is an FSK signal at the correct RF frequency and bandwidth. The output is written to the file `odata/out_app.fsk_rx.bin`.

The next mode is the *tx* mode, which requires the base test setup with a TX antenna, as well as some hardware to verify the transmission, such as a spectrum analyzer or an additional radio running in *rx* mode. In this mode the input file `idata/Os.jpeg` is transmitted out of the RF TX output of the radio.

The final mode is the *txrx* mode. This mode requires a base test setup with either a SMA loopback cable connecting the TX output of the radio to the RX input of the radio, or separate RX/TX antennas if RF usage is desired. An RF splitter can also be used to optionally connect a spectrum analyzer to the RF signal for visual verification. The default values for RF gain assume that an RF splitter is being used.

### 5.3 make show

In order to test the application using the various modes mentioned above, `make show` can be run from the `applications/FSK` directory. This provides instructions (for Zynq-Based Platforms) for setting `OCPI_LIBRARY_PATH` on the hardware platform and then running the application. Finally, it explains how to verify the output data on the development computer. The following sections provide further insight into these instructions.

### 5.4 Artifacts

Before running the application, the location of the required deployable artifacts must be specified in the `OCPI_LIBRARY_PATH` environment variable. Separate artifacts are needed for each RCC worker, and one artifact for the required FPGA image. Furthermore, artifacts differ depending on which mode the application is to be run in. Appendix B includes a list of the artifacts required for each platform and mode.

### 5.5 Arguments to executable

There is only one required initial argument to the FSK App executable, which defines the mode of execution. There is an optional initial argument to the FSK App executable that defines whether or not to run in debug mode. The app prompts the user at runtime for additional values, which vary depending upon the selected mode of operation. Running the application without any arguments prints the usage instructions. The non-initial optional arguments prompt the user to override the default value(s), and primarily configure the RF front end of the given platform using one or more endpoint proxies.

The arguments to the executable are summarized in the following table:

Argument	Mode	Description
mode	n/a	filerw, rx, tx, txrx, bbloopback
debug_mode	optional - 'd' or blank	enables initial and final dump of all properties

The prompts performed by the executable are summarized in the following table:

Argument	Mode	Description
RF frontend (ML605 and zed only)	rx, txrx	zipper, FMCOMMS2, or FMCOMMS3
runtime	filerw, rx, tx, txrx, bbloopback	run time of application in seconds
rx_sample_rate	rx, txrx, bbloopback	RX RF sample rate in Msps
rx_rf_center_freq	rx, txrx, bbloopback	RX RF tuning frequency in MHz
rx_rf_bw	rx, txrx, bbloopback	RX RF bandwidth in MHz
rx_rf_gain	rx, txrx, bbloopback	RX RF gain in dB
rx_bb_bw	rx, txrx, bbloopback	RX baseband bandwidth in MHz
rx_bb_gain	rx, txrx, bbloopback	RX baseband gain in dB
rx_if_center_freq	rx, txrx, bbloopback	RX IF tuning frequency in MHz. 0 disables IF tuning
tx_sample_rate	tx, txrx, bbloopback	TX RF sample rate in Msps
tx_rf_center_freq	tx, txrx, bbloopback	TX RF tuning frequency in MHz
tx_rf_gain	tx, txrx, bbloopback	TX RF gain in dB
tx_bb_bw	tx, txrx, bbloopback	TX baseband bandwidth in MHz
tx_bb_gain	tx, txrx, bbloopback	TX baseband gain in dB

## 5.6 Library Path Requirements

Prior to running the application, the environment variable `OCPI_LIBRARY_PATH` must include the following directories:

### Matchstiq-Z1

- `ocpi.core` component RCC library location
- `ocpi.assets` bitstream directory location
- `ocpi.assets.devices` library location
- `ocpi.assets` component RCC library location

Matchstiq-Z1 additionally requires the following:

- `ocpi.assets.platforms.matchstiq_z1.devices` library location

Note that the Stratix IV GX230 and ML605 hardware setups require the intended slot-specific bitstream's file location to be first in `OCPI_LIBRARY_PATH`. This is necessary because `ocpirun`'s artifact compatibility test does not currently differentiate between slot-connected device workers for multiple bitstreams that contain the same device worker, in the scenario where what differentiates the bitstreams is the device worker's slot connectivity. Reference the OpenCPI Application Development Guide for more about `OCPI_LIBRARY_PATH`.

Examples of library paths that could be used can be seen below:

Note: All example paths are relative to the `applications/FSK/` directory.

### Recommended Library Path for Matchstiq-Z1 or Zedboard or ML605/FMCOMMS2/3-HPC

```
OCPI_LIBRARY_PATH=$OCPI_PROJECT_REGISTRY_DIR/ocpi.core/exports/lib:$OCPI_PROJECT\
_REGISTRY_DIR/ocpi.assets/exports/lib
```

### Recommended Library Path *filerw* mode

```
OCPI_LIBRARY_PATH=$OCPI_PROJECT_REGISTRY_DIR/ocpi.core/exports/lib:$OCPI_PROJECT\
_REGISTRY_DIR/ocpi.assets/exports/lib
```

### Recommended Library Path for Stratix IV GX230/Zipper in HSMC A

*rx*

```
OCPI_LIBRARY_PATH=$OCPI_PROJECT_REGISTRY_DIR/ocpi.core/exports/lib:$OCPI_PROJECT\
_REGISTRY_DIR/ocpi.assets/exports/lib:../../hdl/assemblies/dc_offset_iq_imbalanc\
e_mixer_cic_dec_rp_cordic_fir_real/container-dc_offset_iq_imbalance_mixer_cic_de\
c_rp_cordic_fir_real_alst4_alst4_zipper_hsmc_alst4_port_a_rx_cnt_1rx_0tx_thruasm\
_zipper_hsmc_a_alst4/
```

*tx*

```
OCPI_LIBRARY_PATH=$OCPI_PROJECT_REGISTRY_DIR/ocpi.core/exports/lib:$OCPI_PROJEC\

ic_int_ml605_ml605_zipper_fmc_hpc_tx_cnt_0rx_1tx_thruasm_zipper_hpc_ml605/
```

*txrx/bbloopback*

```
OCPI_LIBRARY_PATH=$OCPI_PROJECT_REGISTRY_DIR/ocpi.core/exports/lib/:$OCPI_PROJEC\
T_REGISTRY_DIR/ocpi.assets/exports/lib:../../../../hdl/assemblies/fsk_modem/container\
-fsk_modem_ml605_ml605_zipper_fmc_hpc_rx_tx_cnt_1rx_1tx_thruasm_zipper_hpc_ml605/
```

## 5.7 Expected results

In the case of the *filerw*, *rx*, *txrx*, and *bbloopback* modes, assuming transmission of the *idata/Os.jpeg* input file, the expected result is a transmitted copy of the JPEG file. A Linux program such as Eye of GNOME (eog) may be used to display the JPEG file. The file is shown in Figure 4.

In the case of the *tx* mode, verification is obtained by viewing the RF spectrum on a spectrum analyzer. An example of the transmitted spectrum may be seen in Figure 5.

Figure 4: FSK input file

Figure 5: Output of FSK App RF transmit

## 5.8 Known Issues

- The *rx* and *tx* modes suffer from limited carrier recovery ability. The requested center frequency may need to be adjusted to a value other than the exact expected nominal value.
- For more information on known limitations when using the Zipper-related platforms (Zedboard, Stratix IV, ML605), see the document Myriad-RF\_1\_Zipper\_Limitations included with this project.
- On x86 host machines with more than one Stratix IV and/or ML605s plugged into PCIe slots, this app will assume that the first found Stratix IV/ML605 has a Zipper/MyriadRF plugged in. The first found Stratix IV/ML605 will be used during execution. While there are means to address this issue, they have not been implemented for the current release.

## 6 Appendix A: Worker Parameters

### Common to all hardware

- dc\_offset\_filter.hdl
  - DATA\_WIDTH\_p = 16
  - PEAK\_MONITOR\_p = true
- iq\_imbalance\_fixer.hdl

- target-linux-c7-x86\_64/lime\_tx\_proxy.s.so
- target-linux-c7-x86\_64/si5351\_proxy.s.so

For Zipper plugged into HSMC Port A:

- fsk\_modem\_alst4\_alst4\_zipper\_hsmc\_alst4\_port\_a\_rx\_tx\_cnt\_1rx\_1tx\_thruasm\_zipper\_hsmc\_a\_alst4.bitz

For Zipper plugged into HSMC Port B:

- fsk\_modem\_alst4\_alst4\_zipper\_hsmc\_alst4\_port\_b\_rx\_tx\_cnt\_1rx\_1tx\_thruasm\_zipper\_hsmc\_b\_alst4.bitz

## 7.5 ML605/FMCOMMS2/3

### filerw (FMCOMMS2/3 not required)

- fsk\_filerw\_ml605.base.bitz
- target-linux-c7-x86\_64/file\_read.s.so
- target-linux-c7-x86\_64/Baudtracking\_simple.s.so
- target-linux-c7-x86\_64/real\_digitizer.s.so
- target-linux-c7-x86\_64/file\_write.s.so

### rx

- target-linux-c7-x86\_64/file\_read.s.so
- target-linux-c7-x86\_64/Baudtracking\_simple.s.so
- target-linux-c7-x86\_64/real\_digitizer.s.so
- target-linux-c7-x86\_64/zipper\_rx.s.so
- target-linux-c7-x86\_64/lime\_rx\_proxy.s.so
- target-linux-c7-x86\_64/si5351\_proxy.s.so

For FMCOMMS2/3 plugged into FMC LPC:

- dc\_offset\_iq\_imbalance\_mixer\_cic\_dec\_timestamper\_ml605\_cfg\_1rx\_0tx  
\_fmcomms\_2\_3\_lpc\_lvds\_cnt\_1rx\_0tx\_thruasm\_fmcomms\_2\_3\_lpc\_LVDS\_ml605.bitz

For FMCOMMS2/3 plugged into FMC HPC:

- dc\_offset\_iq\_imbalance\_mixer\_cic\_dec\_timestamper\_ml605\_cfg\_1rx\_0tx  
\_fmcomms\_2\_3\_hpc\_lvds\_cnt\_1rx\_0tx\_thruasm\_fmcomms\_2\_3\_hpc\_LVDS\_ml605.bitz

### tx

- target-linux-c7-x86\_64/file\_read.s.so
- target-linux-c7-x86\_64/zipper\_tx.s.so
- target-linux-c7-x86\_64/lime\_tx\_proxy.s.so
- target-linux-c7-x86\_64/si5351\_proxy.s.so

For Zipper plugged into FMC LPC:

- mfsk2\_zp16\_fir\_real\_phase\_to\_amp\_cordic\_cic\_int\_ml605\_cfg\_0rx  
\_1tx\_fmcomms\_2\_3\_lpc\_lvds\_cnt\_0rx\_1tx\_thruasm\_fmcomms\_2\_3\_lpc\_LVDS\_ml605.bitz

### txrx/bbloopback

- target-linux-c7-x86\_64/file\_read.s.so
- target-linux-c7-x86\_64/Baudtracking\_simple.s.so
- target-linux-c7-x86\_64/real\_digitizer.s.so
- target-linux-c7-x86\_64/zipper\_rx.s.so
- target-linux-c7-x86\_64/zipper\_tx.s.so
- target-linux-c7-x86\_64/lime\_rx\_proxy.s.so
- target-linux-c7-x86\_64/lime\_tx\_proxy.s.so
- target-linux-c7-x86\_64/si5351\_proxy.s.so

For Zipper plugged into FMC LPC:

- fsk\_modem\_ml605\_cfg\_1rx\_1tx\_fmcomms\_2\_3\_lpc\_lvds\_cnt\_1rx\_1tx  
\_thruasm\_fmcomms\_2\_3\_lpc\_LVDS\_ml605.bitz

## 7.6 ML605/Zipper

### filerw (zipper not required)

- fsk\_filerw\_ml605.base.bitz
- target-linux-c7-x86\_64/file\_read.s.so
- target-linux-c7-x86\_64/Baudtracking\_simple.s.so
- target-linux-c7-x86\_64/real\_digitizer.s.so
- target-linux-c7-x86\_64/file\_write.s.so

### rx

- target-linux-c7-x86\_64/file\_read.s.so
- target-linux-c7-x86\_64/Baudtracking\_simple.s.so
- target-linux-c7-x86\_64/real\_digitizer.s.so
- target-linux-c7-x86\_64/zipper\_rx.s.so
- target-linux-c7-x86\_64/lime\_rx\_proxy.s.so
- target-linux-c7-x86\_64/si5351\_proxy.s.so

For Zipper plugged into FMC LPC:

- dc\_offset\_iq\_imbalance\_mixer\_cic\_dec\_rp\_cordic\_fir\_real\_ml605\_cfg\_1rx\_0tx\_fmcomms\_2\_3\_lpc\_lvds\_cnt\_1rx\_0tx\_thruasm\_fmcomms\_2\_3\_lpc\_LVDS\_ml605.bitz

For Zipper plugged into FMC HPC:

- dc\_offset\_iq\_imbalance\_mixer\_cic\_dec\_rp\_cordic\_fir\_real\_ml605\_cfg\_1rx\_0tx\_fmcomms\_2\_3\_hpc\_lvds\_cnt\_1rx\_0tx\_thruasm\_fmcomms\_2\_3\_hpc\_LVDS\_ml605.bitz

### tx

- target-linux-c7-x86\_64/file\_read.s.so
- target-linux-c7-x86\_64/zipper\_tx.s.so
- target-linux-c7-x86\_64/lime\_tx\_proxy.s.so
- target-linux-c7-x86\_64/si5351\_proxy.s.so

For Zipper plugged into FMC LPC:

- mfsk2\_zp16\_fir\_real\_phase\_to\_amp\_cordic\_cic\_int\_ml605\_ml605\_zipper\_fmc\_lpc\_tx\_cnt\_0rx\_1tx\_thruasm\_zipper\_lpc\_ml605.bitz

For Zipper plugged into FMC HPC:

- mfsk2\_zp16\_fir\_real\_phase\_to\_amp\_cordic\_cic\_int\_ml605\_ml605\_zipper\_fmc\_hpc\_tx\_cnt\_0rx\_1tx\_thruasm\_zipper\_hpc\_ml605.bitz

### txrx/bbloopback

- target-linux-c7-x86\_64/file\_read.s.so
- target-linux-c7-x86\_64/Baudtracking\_simple.s.so
- target-linux-c7-x86\_64/real\_digitizer.s.so
- target-linux-c7-x86\_64/zipper\_rx.s.so
- target-linux-c7-x86\_64/zipper\_tx.s.so
- target-linux-c7-x86\_64/lime\_rx\_proxy.s.so
- target-linux-c7-x86\_64/lime\_tx\_proxy.s.so
- target-linux-c7-x86\_64/si5351\_proxy.s.so

For Zipper plugged into FMC LPC:

- fsk\_modem\_ml605\_ml605\_zipper\_fmc\_hpc\_rx\_tx\_cnt\_1rx\_1tx\_thruasm\_zipper\_lpc\_ml605.bitz

For Zipper plugged into FMC HPC:
